consider the equation of the system
x - 7y = -5
3x + y = 0
now forming matrix equation

$$AX = B$$

$$A = \begin{bmatrix} 1 & -7 \\ 3 & 1 \end{bmatrix} beafull - rank$$

2×2 matrix. Then $\det A \equiv |A| = 1 \times 1 - -3 \times 7 = 21$ and

$$A^{-1} = \begin{bmatrix} 1 & -7 \\ 3 & 1 \end{bmatrix}^{-1} = \frac{1}{|21|} \begin{bmatrix} 1 & 7 \\ -3 & 1 \end{bmatrix}.$$

$$X = \begin{bmatrix} x \\ y \end{bmatrix}$$

$$B = \begin{bmatrix} -5 \\ 0 \end{bmatrix}$$

$$X = A^{-1}B$$

$$\begin{bmatrix} x \\ y \end{bmatrix} = \frac{1}{|21|} \begin{bmatrix} 1 & 7 \\ -3 & 1 \end{bmatrix} \begin{bmatrix} -5 \\ 0 \end{bmatrix}$$

$$\begin{bmatrix} x \\ y \end{bmatrix} = \begin{bmatrix} \frac{-5}{22} \\ \frac{15}{22} \end{bmatrix}$$

above are required value of x and y (point of intersection) now , equation of line parallel to y-axis through the point of intersection is x= p and the point of intersection will satisfy the the equation (x=p) hence equation will be x = -5/22
